

Screening Saves Lives

3D Screening Mammography

- The American College of Radiology (ACR) and Society of Breast Imaging (SBI) recommend that women of average risk start having an annual exam at age 40
- Uninsured or underinsured patients may qualify for preventative screenings through the RI Department of Health Women's Cancer Screening Program
- Services are available at 12 RIMI locations with evening and weekend hours
- We have 4 spa-like breast imaging centers for diagnostic patients

CT Lung Cancer Screening

- First comprehensive outpatient Lung Cancer Screening program in RI
- Screenings are covered by most insurance companies for qualified patients
- Smokers between the ages of *50-80 should speak with their healthcare Provider about coverage and eligibility (*Age and smoking history varies by insurance)
- Services are available at 10 RIMI locations with evening and weekend hours

CT Cardiac Calcium Scoring (CCS)

- According to the American College of Cardiology (ACC) and the American Heart Association (AHA) patients between the ages of 40-75 with an increased risk of heart disease should have this exam every 2-5 years
- The exam quantifies your risk of having heart disease or a heart attack
- Services are available at 7 RIMI locations for a \$150.00 self-pay rate

Virtual Colonoscopy (CTC)

- According to the US Preventive Services Task Force (USPSTF) patients between the ages of 45-75 should be screened for Colorectal Cancer
- CTC is a less invasive screening exam that does not require Anesthesia
- Great option for any patient with a previously incomplete Colonoscopy
- Services are available at 1 RIMI location
